Category: Fashion-Tech

1. Oftentimes shoppers see pieces they'd like to have in their wardrobe, but don't know where to buy them. This is where Style Scout will help, by using images users upload to source these pieces.

2. Style Scout is a fashion-tech app that uses image recognition and visual search to help users find clothing based on photos. Users upload an image, and the app identifies key clothing items such as tops, pants, dresses, shoes, jackets, and accessories. It then presents matching or visually similar products from different retailers, along with prices and purchase links. The MVP will focus on image upload, clothing identification, and product matching.

3. The primary users are Gen Z and millennial shoppers who frequently discover fashion through social media platforms such as Instagram, TikTok, and Pinterest. The potential market is large because online shopping and social-media-driven fashion discovery are widely used by consumers.

4.Style Scout solves the frustrating gap between "I like this outfit" and "Where can I buy it?" Instead of searching manually using vague descriptions, shoppers can use an image as their search query. For businesses, Style Scout can also generate revenue by directing shoppers to retailers and earning commissions from purchases.

5. Style Scout will use a freemium model, allowing users to perform a limited number of searches for free while offering unlimited searches and advanced features through a premium subscription. The app can also generate revenue through affiliate commissions when users purchase products through retailer links.

6. Image Upload & Analysis
    - Users upload a photo or screenshot of an outfit.
- AI Clothing Detection
    - The app identifies individual pieces such as shirts, pants, dresses, shoes, jackets, and accessories.
- Visual Product Search
    - The app finds matching or visually similar products from online retailers.
- Product Results
    - Users can compare products, prices, retailers, and purchase options.
- Save/Bookmark
    - Users can save products they want to revisit.
